

Introducing

ISOframe
express pop-up

The pop-up that doesn't look like a pop-up

- Ultra slim 200mm deep framework maximizes floor space.
- Square ends mean easy to hang graphics that stay attached, also square ends mean more space in shell scheme stands as the framework can now go up to the edge.
- Super-strong cross-braced framework- attach large media screens, tables and shelves.
- Standard height is 2.25m perfect for shell schemes however we can extend framework to 3m or even 3.75m high.
- Separate frames can be linked in a straight line, curved or right angled corners.
- Choose from our standard range or allow us to design a special shape to suit your floor space and brief. Add table attachments easily in seconds.

Cross braced framework

ISOframe Express Pop-up kits come in a single framework set-up no need for linking panels. Our cross-braced frames ensure your graphics hang perfectly even on uneven floors.
